Table 1. Page by page comments on Comprehensive Dermatologic Drug Therapy (Second Edition)

P53 The test should mention generic azithromycin and the new weekly liquid forumulation of a azithromyc P54 Rapid development of resistance to fluroquinonlones occurs and mention of this needs to be stressed. P61 While the text lists the combination product of Trimethoprim-Sulfamethoxazole, it should also mention trimethoprim and Sulfamethoxazole exist as individual drugs. P63 The price of linezolid is over \$1000 for a week supply and this must be considered in using it. P64 The text should address the question of whether folate or leucovorin should always be used with Trimethoprim-Sulfamethoxazole. P64-5 The text should mention inducible resistance for Clindamycin in organisms resistant to erythromycin P66 The real life limiting side effect of tigercycline is GI toxicity and this should be mentioned. P7 The text discuss terbenifine should mention Lamisil flakes are a new formulation of this medication P7 R52-3.88 Raltegravir (Sentress – Merck), an oral HIV-1 integrase strand transfer inhibitors (InSTI) and Maraviroe (Selzentry – Pfizer), the first CCR5 (CC chemokine receptor 5). P173 It is wrong to suggest that the combination of methotrexate and alefacept is problematic as there is no evidence to show mixing methotrexate and alefacept increases infection; there was a trial that showed safe combination. P18- QuantitERONE—T8, a test for tuberculosis should be mentioned in considering testing before using biologies & immunosuppressive medications. P208-12 Celleept (mycophenolate mofetil) is not a cytotoxic agent it is more of an immune suppressant Celleept it is almost certainly less cytotoxic than azathioprine. Cellcept's approval for the treatment of lupus nephritis in some countries should be included. Myfortic is an enteric coated typeof Mycophenolic acid. Myfortic is pregnancy category D. Cellcept's ability to cause anemia is not well reported in the dermatology literature but it can occur an hence a complete blood cell count should be followed while using Cellcept [4]. P213 The link of hydroxurea and derma		
The text should mention that azithromycin has 2-4 times more gram negative activity than erythromyc P54 Rapid development of resistance to fluroquinonlones occurs and mention of this needs to be stressed. While the text lists the combination product of Trimethoprim-Sulfamethoxazole, it should also mentior trimethoprim and Sulfamethoxazole exist as individual drugs. P63 The price of linezolid is over \$1000 for a week supply and this must be considered in using it. P64 The text should address the question of whether folate or leucovorin should always be used with Trimethoprim-Sulfamethoxazole P64-5 The text should address the question of whether folate or leucovorin should always be used with Trimethoprim-Sulfamethoxazole P64-5 The text should and sulfamethoxazole P65 The text discuss terbenifine should mention Lamisil flakes are a new formulation of this medication R23-385 To complete a discussion of HIV medications, the text should discuss Raltegravir (sentress – Merck), an oral HIV-1 integrase strand transfer inhibitors (InST1) and Maraviroc (Selzentry – Prizer), the first CCR5 (CC) chemokine receptor 5). P173 It is wrong to suggest that the combination of methotrexate and alefacept is problematic as there is no evidence to show mixing methorexate and alefacept increases infection; there was a trial that showed safe combination[3] P178- D0antiFFRON®-TB, a test for tuberculosis should be mentioned in considering testing before using biologies & immunosuppressive medications. P208-12 Celleept (mycophenolate mofetil) is not a cytotoxic agent it is more of an immune suppressant Celleept it is almost certainly less cytotoxic han azathioprine. Celleept's approval for the treatment of lupus nephritis in some countries should be included. Myfortic is an enteric coated typed flyvophenolic acid. Myfortic is pregnancy category D. Celleept's ability to cause anemia is not well reported in the dermatology literature but it can occur an hence a complete blood cell count should be followed while using Celleept [4]. P240-50 S		Pager Specific Reviewer Comments.
P54 Rapid development of resistance to fluroquinonlones occurs and mention of this needs to be stressed. While the text lists the combination product of Trimethoprim-Sulfamethoxazole, it should also mentic Trimethoprim and Sulfamethoxazole exist as individual drugs. P63 The price of linezolid is over \$1000 for a week supply and this must be considered in using it. P64 The text should address the question of whether folate or leucovorin should always be used with Trimethoprim-Sulfamethoxazole P64-5 The text should mention inducible resistance for Clindamycin in organisms resistant to erythromycin Trimethoprim-Sulfamethoxazole P64-5 The text should mention inducible resistance for Clindamycin in organisms resistant to erythromycin The text discuss terbenifine should mention Lamisil flakes are a new formulation of this medication Se2-3,85 P65 The text discuss terbenifine should mention Lamisil flakes are a new formulation of this medication Raltegravir (Isentress – Merck), an oral HIV-1 integrase strand transfer inhibitors (InSTI) and Maraviroc (Selzentry – Pfizer), the first CCR5 (CC chemokine receptor 5). P173 It is wrong to suggest that the combination of methotrexate and alefacept is problematic as there is no evidence to show mixing methotrexate and alefacept increases infection; there was a trial that showed safe combination. [3] P178- QuntifferNoR-TB, a test for tuberculosis should be mentioned in considering testing before using biologics & immunosuppressive medications. P208-12 Cellcept (mycophenolate mofetil) is not a cytotoxic agent it is more of an immune suppressant Cellcept fit is almost certainly less cytotoxic than azathioprine. Cellcept's approval for the treatment of lupus nephritis in some countries should be included. Myfortic is an enteric coated typeof Mycophenolic acid. Myfortic is pregnancy category D. Cellcept's ability to cause anemia is not well reported in the dernatology literature but it can occur an here are a complete blood cell count should be followed while using Cellcep		The text should mention that azithromycin has 2-4 times more gram negative activity than erythromycin
P61 While the text lists the combination product of Trimethoprim-Sulfamethoxazole, it should also mentic Trimethoprim and Sulfamethoxazole exist as individual drugs. P63 The price of linezolid is over \$1000 for a week supply and this must be considered in using it. P64 The text should address the question of whether folate or leucovorin should always be used with Primethoprim-Sulfamethoxazole P64-5 The text should mention inducible resistance for Clindamycin in organisms resistant to erythromycin P66 The real life limiting side effect of tigercycline is GI toxicity and this should be mentioned. P7 The text discuss terbenifine should mention Lamisil flakes are a new formulation of this medication R22-3,85 P113 To complete a discussion of HIV medications, the text should discuss Raltegravir (Isentress – Merck), an oral HIV-1 integrase strand transfer inhibitors (InSTI) and Maraviroc (Selzentry – Pfizer), the first CCRS (CC chemokine receptor 5). P173 It is wrong to suggest that the combination of methotrexate and alefacept is problematic as there is no evidence to show mixing methotrexate and alefacept increases infection; there was a trial that showed safe combination [3] P178- QuantiFERON®-TB, a test for tuberculosis should be mentioned in considering testing before using biologics & immunosuppressive medications. P208-12 Cellcept it is almost certainly less cytotoxic than azathioprine. Cellcept's approval for the treatment of lupus nephritis in some countries should be included. Myfortic is an enteric coated type of Mycophenolic acid. Myfortic is pregnancy category D. Cellcept's ability to cause anemia is not well reported in the dermatology literature but it can occur an hence a complete blood cell count should be followed while using Cellcept [4]. P213 The link of hydroxure and dermatomyositis deserves a explication P244 Dapsone really has no effects on diseases related to monocytes and eosinophils, so suggesting it is useful in this regard in problematic. P240-50 Valfasalazine should be discussed by the te	P53	The test should mention generic azithromycin and the new weekly liquid forumulation of a azithromycin

P384 Raptiva (efalizumab) can worsen psoriatic arthritis so this should be mentioned as a possible side effect efalizumab. P451 Olanzapine (Zyprexa) and Risperidone (Resperdal) are now the first line treatments for delusions of parasitosis and not Pimozide/Orap. P527 The text needs to mention it is nasal bactroban that was studied for the treatment of nasal carriage of finasal carriage of staphylococcus. Nasal bactroban was prepared in single use 1 gram tubes with a sligh different chemical preparation than Bactroban for topical use. This is nasal treatment bactroban is harmone impossible to get now Centany, a topical preparation of mupirocin with propylene glycol made by Neutrogenia is not mentioned P646 The ext must mention very high cost for topical nitrogen mustard now that Ovation Pharmaceuticals be rights to make nitrogen mustard into a gel for treatment of CTCL from Merck. P692-699 Text needs to discuss Taclonex extensively (There is a short discussion on the addendum on page 1051 that is too limited) P726- Text needs to review tea tree oil shampoo as it is relevant here to the treatment of seborrheic dermatitis P754-5 Urea section could be expanded slightly and more products are on the market. P793 There is more data on the insect repellant Picaridin then in the text and two Picaridin products on the I	P284	subject state "Monotherapy with isotretinoin for patients with HS usually has a limited therapeutic
P451 Olanzapine (Zyprexa) and Risperidone (Resperdal) are now the first line treatments for delusions of parasitosis and not Pimozide/Orap. P527 The text needs to mention it is nasal bactroban that was studied for the treatment of nasal carriage of finasal carriage of staphylococcus. Nasal bactroban was prepared in single use 1 gram tubes with a slig different chemical preparation than Bactroban for topical use. This is nasal treatment bactroban is harmonic impossible to get now Centany, a topical preparation of mupirocin with propylene glycol made by Neutrogenia is not mentioned P646 The ext must mention very high cost for topical nitrogen mustard now that Ovation Pharmaceuticals brights to make nitrogen mustard into a gel for treatment of CTCL from Merck. P692-699 Text needs to discuss Taclonex extensively (There is a short discussion on the addendum on page1051 that is too limited) P726- Text needs to review tea tree oil shampoo as it is relevant here to the treatment of seborrheic dermatitis P754-5 Urea section could be expanded slightly and more products are on the market. P793 There is more data on the insect repellant Picaridin then in the text and two Picaridin products on the U	P290	Prospective study does not link isotretinoin and depression so listing depression as a side effect of isotretinoin is not accurate. [6]
parasitosis and not Pimozide/Orap. P527 The text needs to mention it is nasal bactroban that was studied for the treatment of nasal carriage of for nasal carriage of staphylococcus. Nasal bactroban was prepared in single use 1 gram tubes with a slight different chemical preparation than Bactroban for topical use. This is nasal treatment bactroban is harmone impossible to get now Centany, a topical preparation of mupirocin with propylene glycol made by Neutrogenia is not mentioned P646 The ext must mention very high cost for topical nitrogen mustard now that Ovation Pharmaceuticals brights to make nitrogen mustard into a gel for treatment of CTCL from Merck. P692-699 Text needs to discuss Taclonex extensively (There is a short discussion on the addendum on page1051 that is too limited) P726- Text needs to review tea tree oil shampoo as it is relevant here to the treatment of seborrheic dermatitis P754-5 Urea section could be expanded slightly and more products are on the market. P793 There is more data on the insect repellant Picaridin then in the text and two Picaridin products on the U	P384	Raptiva (efalizumab) can worsen psoriatic arthritis so this should be mentioned as a possible side effect of efalizumab.
nasal carriage of staphylococcus. Nasal bactroban was prepared in single use 1 gram tubes with a slig different chemical preparation than Bactroban for topical use. This is nasal treatment bactroban is hard not impossible to get now Centany, a topical preparation of mupirocin with propylene glycol made by Neutrogenia is not mentioned P646 The ext must mention very high cost for topical nitrogen mustard now that Ovation Pharmaceuticals brights to make nitrogen mustard into a gel for treatment of CTCL from Merck. P692-699 Text needs to discuss Taclonex extensively (There is a short discussion on the addendum on page1051 that is too limited) P726- Text needs to review tea tree oil shampoo as it is relevant here to the treatment of seborrheic dermatitis P754-5 Urea section could be expanded slightly and more products are on the market. P793 There is more data on the insect repellant Picaridin then in the text and two Picaridin products on the U	P451	parasitosis and not Pimozide/Orap.
rights to make nitrogen mustard into a gel for treatment of CTCL from Merck. P692-699 Text needs to discuss Taclonex extensively (There is a short discussion on the addendum on page1051 that is too limited) P726- Text needs to review tea tree oil shampoo as it is relevant here to the treatment of seborrheic dermatitis P754-5 Urea section could be expanded slightly and more products are on the market.
